

DATIS

**Supporting Ontario's Healthcare System with
High Quality Information**

What we would like to discuss today

DATIS History.

DATIS DTFP – Review of Addiction Treatment Data Elements & Provincial Service Categories.

Answering your questions.

Who We Are

The Drug & Alcohol Treatment Information System was created in 1994 as a project of the Addiction Research Foundation.

DATIS is currently a Centre for Addiction and Mental Health program fully funded by the Ministry of Health & Long Term Care - Health Data Branch.

DATIS is composed of two departments. The Database & Reports Team is responsible for the Oracle database, reports and Software maintenance. The Data Quality Team is responsible for Quality Improvement and agency support & training.

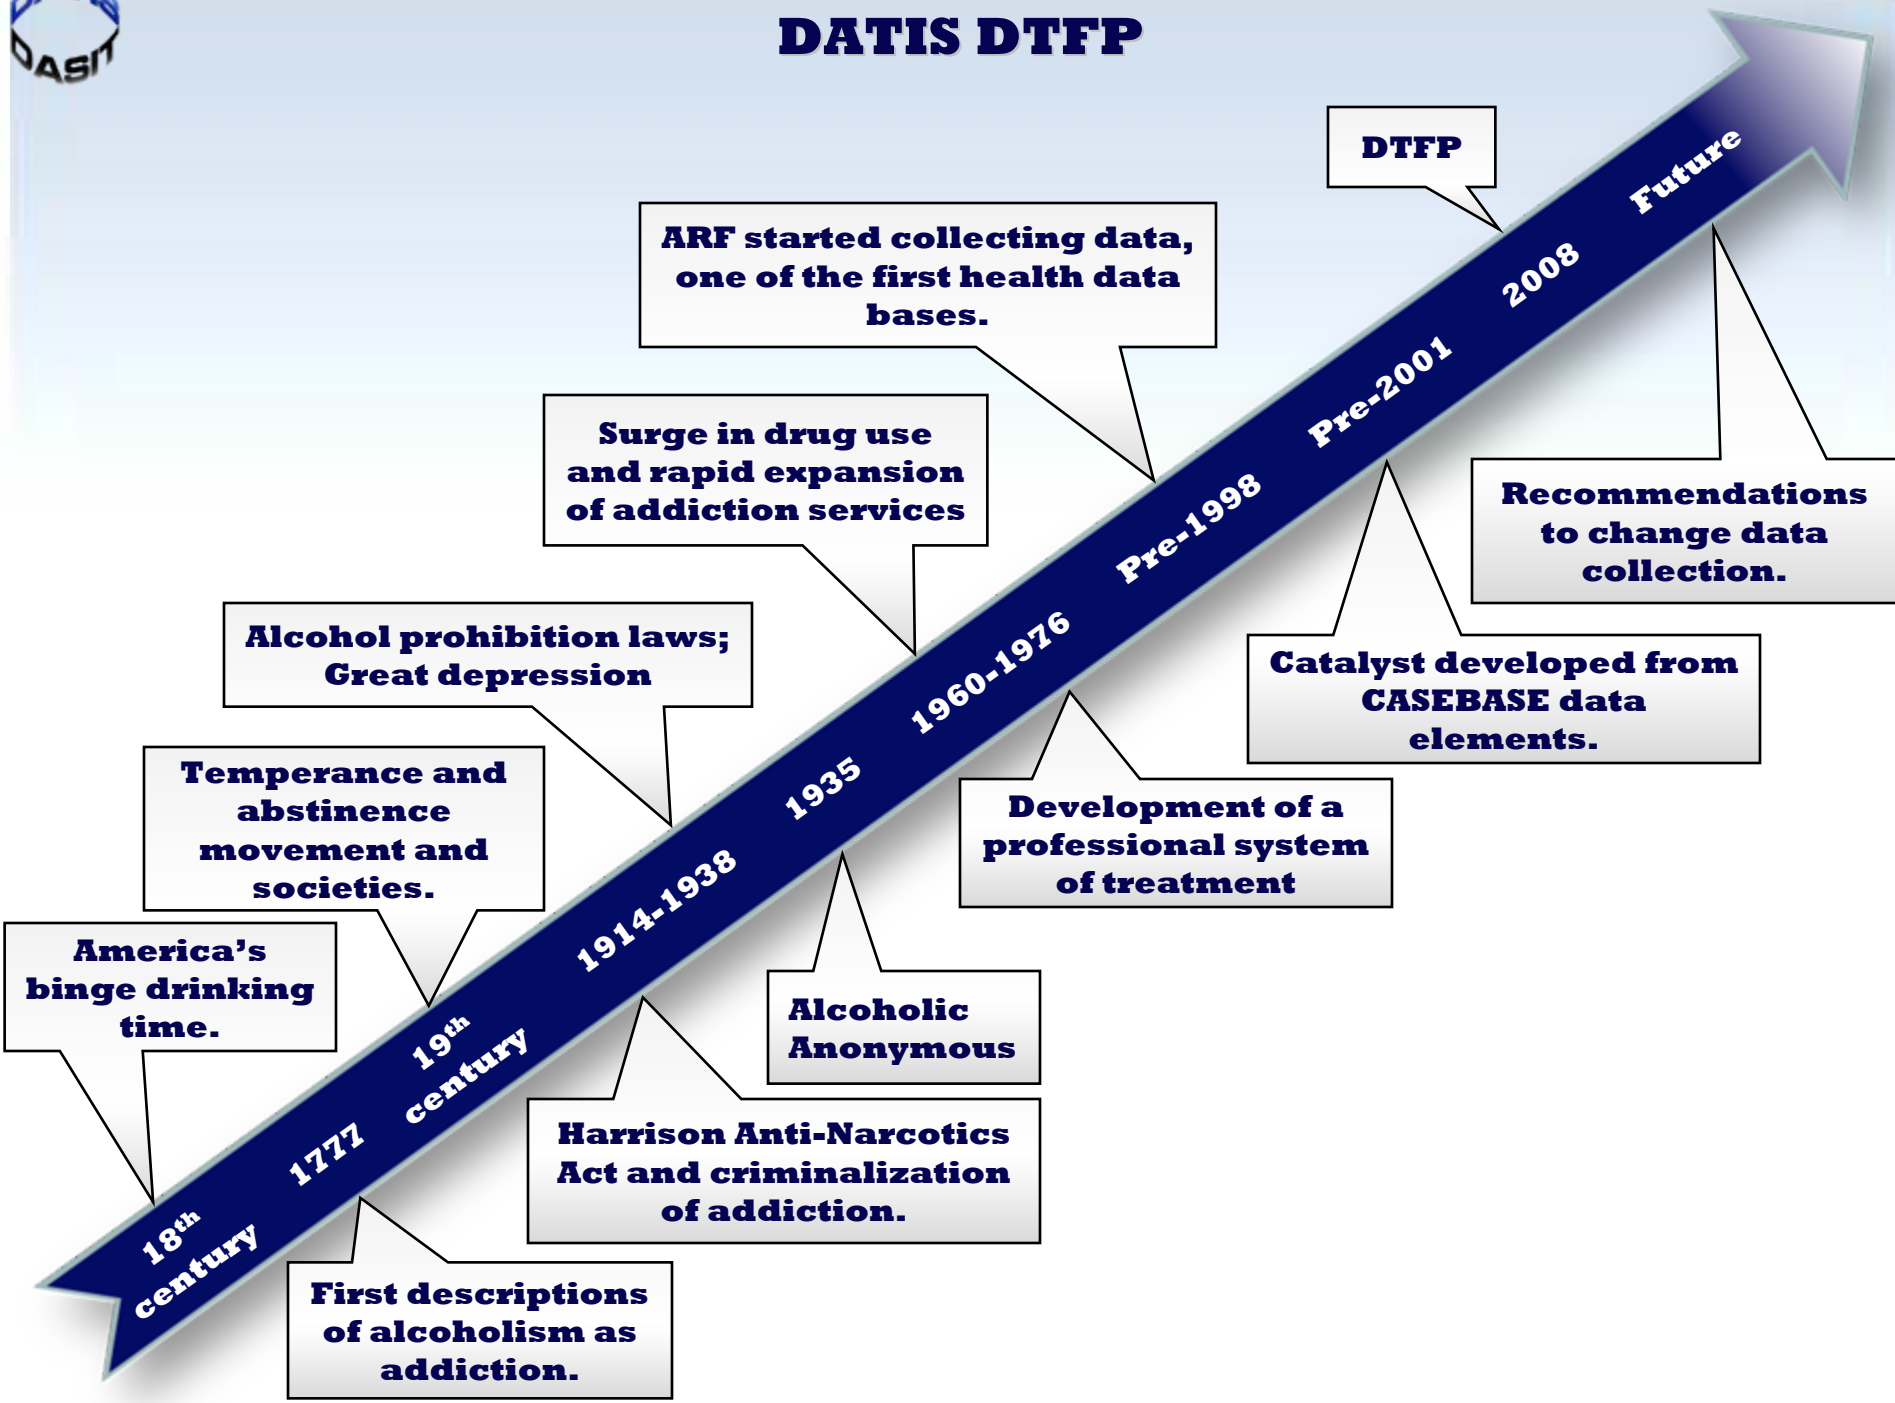

Scope

There are currently close to 170 participating agencies submitting mandated data to DATIS via Catalyst, a Software developed and maintained by DATIS.

Via Catalyst and Interface, DATIS collects 66 mandatory fields, ADAT tools and offers the capacity to collect 25 additional agency-driven optional fields.

To date, DATIS has demographic and service delivery data on close to one million clients who have received SA & PG services.

DATIS DTFP

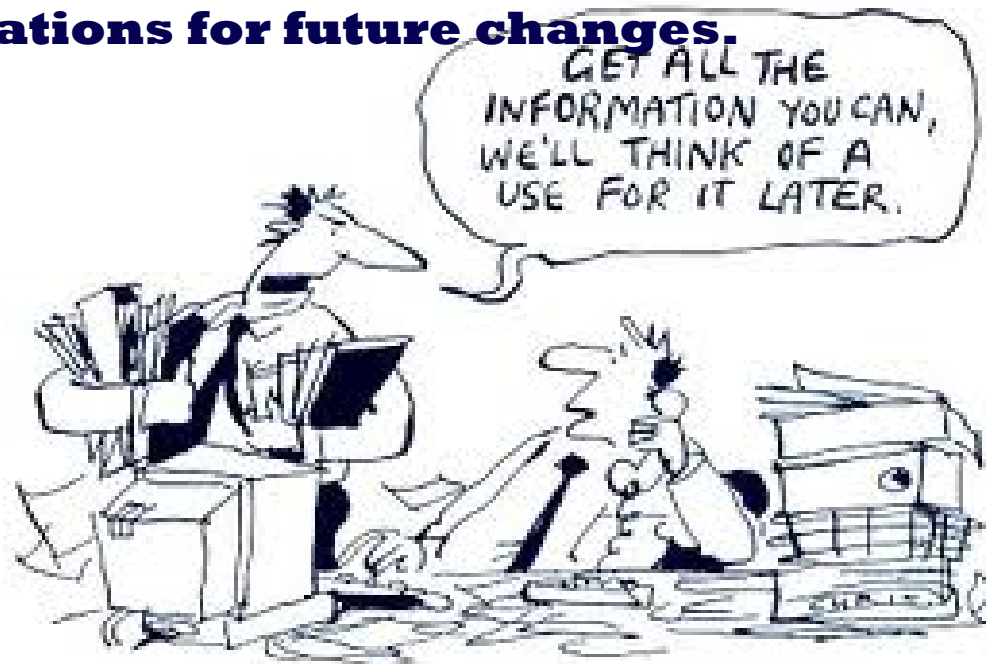

The future lies in the best practice of data collection.

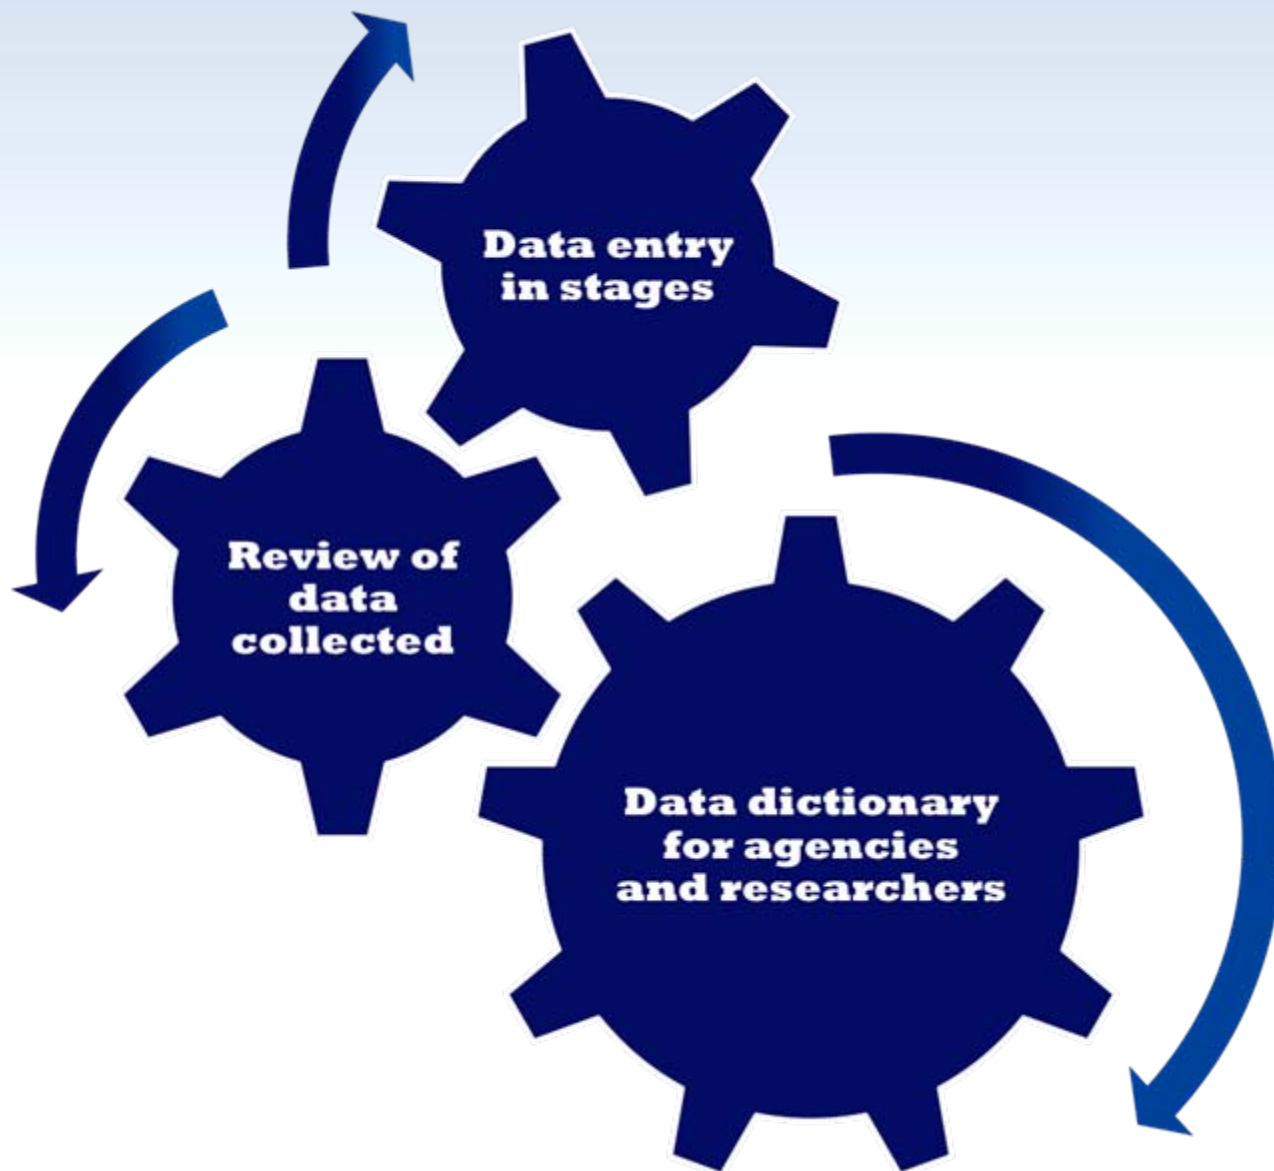

Professionalization of the treatment involves the best practice of data collection.

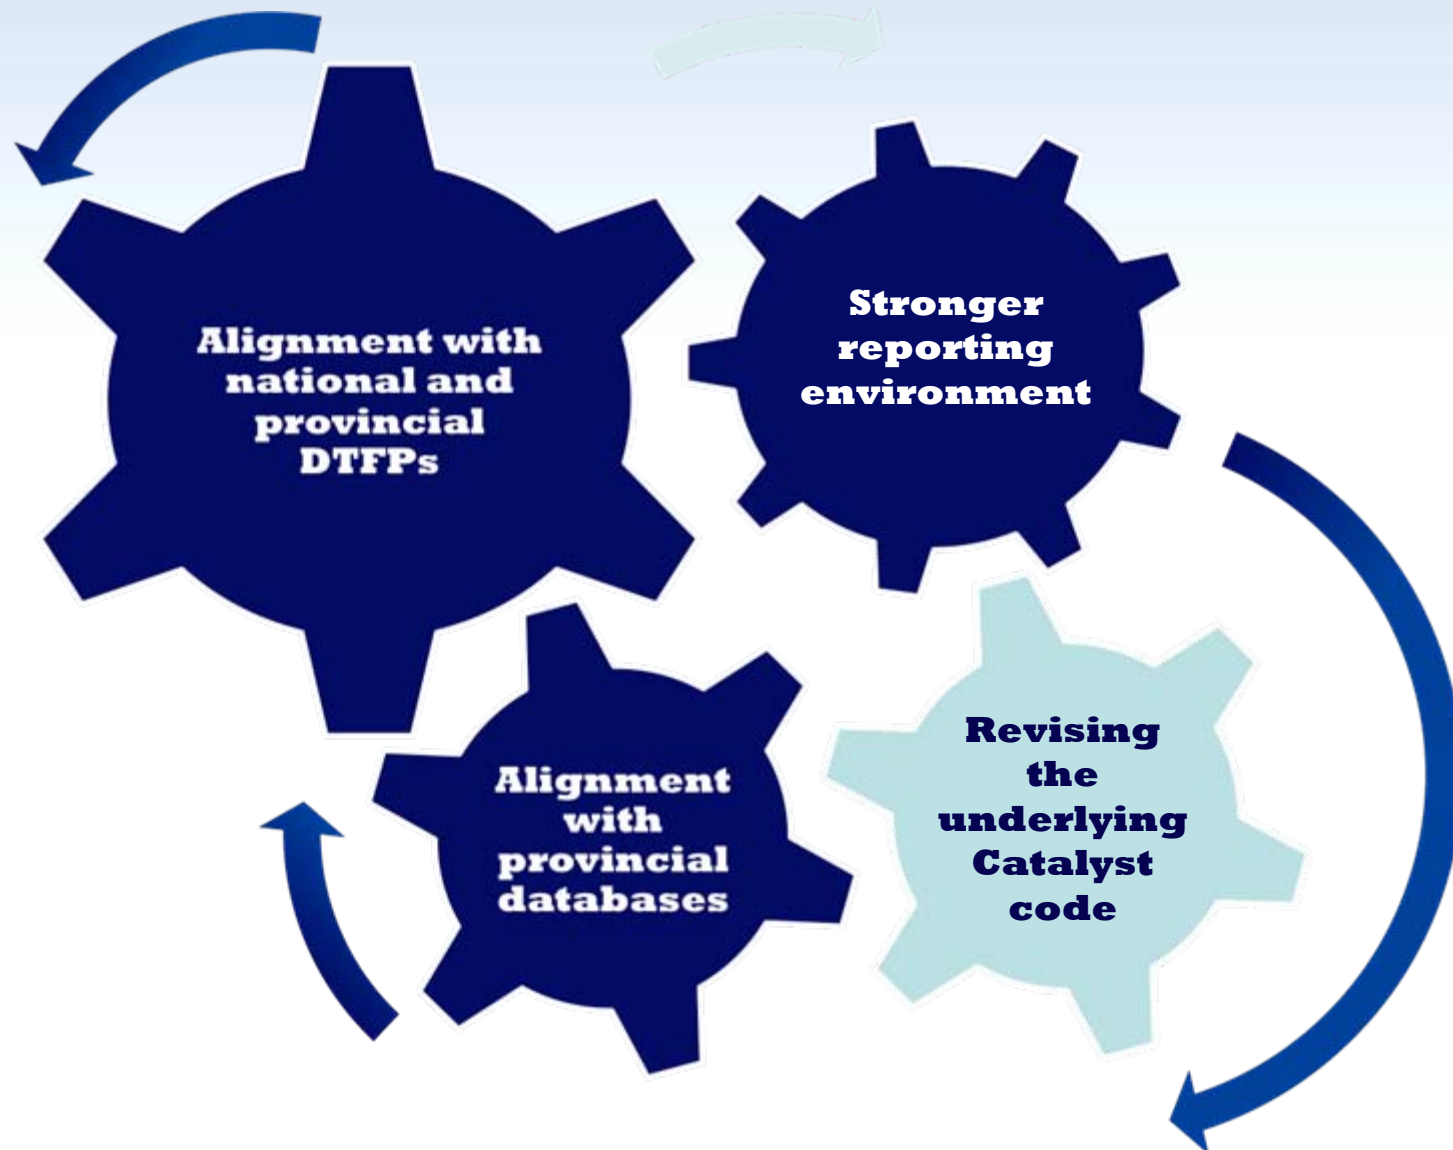

This allows for a better data analysis and recommendations for future changes.
